JCARES Home Exercise 2024

Sequence of Events Saturday, April 6, 2024

1 0:00000000000000000000000000000000000	#	4/6/2024	Activity	Notes
system for the Kansas City and Jackson County area. Power has been interrupted over a large part of the metro area. 2 9:00 AM Participants will check into the regular JCARES Saturday morning net to receive further instructions about the incident. They will be instructed to establish emergency backup communications for an emerency exercise net to start at 10:00 AM. 3 9:30 AM Participants will leave the normal checkin net and commence setup of their emergency stations. They are to monitor the 146.820 repeater until emergency operations start at 10 Outside of their homes, not using a/c power. As if out in the field. 4 10:00 AM Net Control opens the emergency communications exercise on the 146.820 repeater. Participants may check in and report the status of their stations at this time. 5 10:10 AM Net control conducts initial roll call of group, where the participants report the amount of ice at their location, status of electrical power, and any other info pertaining to the weather event. 6 10:30 AM Net control instructs all participants to copy a message from county emergency management in ARRL radiogram format. 7 11:00 AM Net control conducts roll call of group on simplex operation frequency 146.820 MHz. 10 11:15 AM Net control instructs all stations to return to repeater operation frequency 146.820 MHz. 10 11:20 AM Net control sends digital message using FL-Digi and requests confirmation back using FL-Digi gim ode.	<u> </u>		-

Outside of their homes, not using a/c power. As if out in the field. 5 10:10 AM Net control onducts initial rolical of group, where the participants report the amount of ice at their location, status of electrical power, and any other info pertaining to the weather event. 0 6 10:30 AM Net control instructs all participants to copy a message from county emergency management in ARRL radiogram format. 7 7 11:00 AM Net control instructs all participants to switch to simplex operation on 146.820 frequency. 8 11:00 AM Net control instructs all stations to return to repeate operation frequency 146.820 Mhz. 10 11:20 AM Net control instructs th	1	0.30 AW		
2 9:00 AM Participants will check into the regular JCARES Saturday morning net to receive further instructions about the incident. They will be instructed to establish emergency backup communications for an emerency exercise net to start at 10:00 AM. 3 9:30 AM Participants will leave the normal checkin net and commence setup of their emergency stations. They are to monitor the 146.820 repeater until emergency operations start at 10 Outside of their homes, not using a/c power. As if out in the field. 4 10:00 AM Net Control opens the emergency communications exercise on the 146.820 repeater. Participants may check in and report the status of their stations at this time. Outside of their homes, not using a/c power. As if out in the field. 5 10:10 AM Net control conducts initial roll call of group, where the participants report the amount of ice at their location, status of electrical power, and any other info pertaining to the weather event. Image: their location instructs all participants to copy a message from county emergency management in ARRL radiogram format. 7 11:00 AM Net control instructs all participants to switch to simplex operation frequency 146.820. Participants monitor roll call of group on simplex operation frequency 146.820. Participants monitor roll call and assist with any relays needed to allow an operator to reach net control instructs all stations to return to repeater operation frequency 146.820 Maz. 10 11:20 AM Net control instructs all stations with FL-Digi capability to prepare to copy a digital message at 11:30AM. 11 11:30 AM				
1 11:00 AM Participants will deare the order to establish emergency backup communications for an emerency exercise net to start at 10:00 AM. Outside of their homes, not using a/c power. As if out in the field. 4 10:00 AM Net Control opens the emergency communications exercise on the 146.820 repeater. Participants may check in and report the status of their stations at this time. Outside of their homes, not using a/c power. As if out in the field. 5 10:10 AM Net control opens the emergency communications exercise on the 146.820 repeater. Participants may check in and report the status of their stations at this time. Outside of their homes, not using a/c power. As if out in the field. 6 10:10 AM Net control conducts initial roll call of group, where the participants report the amount of ice at their location, status of electrical power, and any other info pertaining to the weather event. Participants to copy a message from county emergency management in ARRL radiogram format. 7 11:00 AM Net control instructs all participants to copy a message from county emergency the amount of reach net control. 8 11:00 AM Net control instructs all participants to switch to simplex operation frequency 146.820. 9 11:15 AM Net control instructs all stations to return to repeater operation frequency 146.820 Mhz. 10 11:20 AM Net control instructs all stations to return to repeater operation frequency 146.820 Mhz. 11 11:30 AM </td <td>2</td> <td></td> <td></td> <td></td>	2			
communications for an emerency exercise net to start at 10:00 AM. 3 9:30 AM Participants will leave the normal checkin net and commence setup of their emergency start at 10 AM. Outside of their homes, not using a/c power. As if out in the field. 4 10:00 AM Net Control opens the emergency communications exercise on the 146.820 repeater. Participants may check in and report the status of their stations at this time. Outside of their homes, not using a/c power. As if out in the field. 5 10:10 AM Net control conducts initial roll call of group, where the participants report the amount of ice at their location, status of electrical power, and any other info pertaining to the weather event. 6 10:30 AM Net control instructs all participants to copy a message from county emergency management in ARRL radiogram format. 7 11:00 AM Net control conducts roll call of group on simplex operation frequency 146.820. 8 11:00 AM Net control call and assist with any relays needed to allow an operator to reach net control. 9 11:15 AM Net control instructs tall stations to return to repeater operation frequency 146.820 Mhz. 10 11:20 AM Net control sends digital message using FL-Digi and requests confirmation back using FL-Digi mode. 11 11:30 AM Net control stands by for Winlink messages from those stations with Winlink capability through the W00EM-10 packet ga	2	9.00 AM		
3 9:30 AM Participants will leave the normal checkin net and commence setup of their emergency stations. They are to monitor the 146.820 repeater until emergency operations start at 10 AM. Outside of their homes, not using a/c power. As if out in the field. 4 10:00 AM Net Control opens the emergency communications exercise on the 146.820 repeater. Participants may check in and report the status of their stations at this time. Outside of their homes, not using a/c power. As if out in the field. 5 10:10 AM Net control conducts initial roll call of group, where the participants report the amount of ice at their location, status of electrical power, and any other info pertaining to the weather event. Image: Control instructs all participants to copy a message from county emergency management in ARRL radiogram format. 7 11:00 AM Net control instructs all participants to switch to simplex operation on 146.820 frequency. 8 11:00 AM Net control call of group on simplex operation frequency 146.820 Mhz. 9 11:15 AM Net control instructs all stations to return to repeater operation frequency 146.820 Mhz. 10 11:20 AM Net control sends digital message using FL-Digi capability to prepare to copy a digital message at 11:30AM. 11 11:30 AM Net control sends digital message stoms with FL-Digi and requests confirmation back using FL-Digi mode. 12 11:45 AM Net control stands by for Winlink messages from those stations with Wi				
stations. They are to monitor the 146.820 repeater until emergency operations start at 10 AM. Outside of their homes, not using a/c power. As if out in the field. 4 10:00 AM Net Control opens the emergency communications exercise on the 146.820 repeater. Participants may check in and report the status of their stations at this time. Image: Communication open static participants report the amount of ice at their location, status of electrical power, and any other info pertaining to the weather event. 6 10:30 AM Net control instructs all participants to copy a message from county emergency management in ARRL radiogram format. 7 11:00 AM Net control instructs all participants to switch to simplex operation on 146.820 frequency. 8 11:00 AM Net control conducts roll call of group on simplex operation frequency 146.820. Participants monitor roll call and assist with any relays needed to allow an operator to reach net control. 9 11:15 AM Net control instructs all stations to return to repeater operation frequency 146.820 Mhz. 10 11:20 AM Net control sends digital message using FL-Digi capability to prepare to copy a digital message at 11:30AM. 11 11:30 AM Net control sends digital message sfrom those stations with Winlink capability through the WOOEM-10 packet gateway 145.090 Mhz or the WOJWT gateway 145.050 Mhz.
